CACFP Point-of-Service Meal Capture

Presenting our latest *eServices* addition to **ChildWatch[®] Online Services** - portable meal capture!

Simply connect to any compatible hand-held device (*iPhone[®], iPad[®], iPod[®], or Android[®]*) and you have a handy portable device for capturing child meals and attendance at the point-of-service. Capture is restricted to the meal time so fraud is virtually eliminated.

Marking paper rosters for later entry into **ChildWatch[®]** becomes unnecessary saving time & money. After meal capture is complete, Meal Service Record (MSR) reports may be printed for hard-copy retention.

No longer can providers fall behind in their transfer from paper records to the computer, holding up the claim for everyone. This feature eliminates all excuses and makes meal capture quick & simple!

There's nothing like it and it's available now to new and existing customers!

How it Works

The process capturing meals is quite simple. There are just a couple of things needed...

- an *iPhone®*, *iPad®*, *iPod®*, or *Android®* device
- Wireless Internet through phone or WLAN.

The *iPod Touch®* (about \$160 street price for 8GB 2nd generation) offers a simple solution without the cost of having a phone carrier.

If you have high-speed Internet (e.g. cable or DSL) you simply need wireless access to it. Many ISPs (Internet Service Providers) offer wireless routers. If yours does not, you can add wireless to your network for about \$25.

In any case, users log into the device during the time of the meal. A classroom is selected and the list of children is presented. By simply touching the line with each child's name, a meal (or attendance only) may be recorded. Mistakes are cleared by touching the same area again.

Counts of meals and attendance only are maintained at the top. Larger classrooms can be scrolled using a swiping finger gesture on the device.

An adjustable "leeway" time is provided for capture beyond the end of the meal period. **ChildWatch®** automatically handles cases where children are not be eligible to receive a meal.

When completed, a touch to the "**SAVE**" button and the meals are recorded. It's on to the next classroom, quick & simple!

Benefits

The point-of-service electronic meal capture method offers many advantages when compared to traditional paper recording...

- **Reduces Fraud.** Fraud is virtually eliminated as meals may only be captured during the approved meal time.
- **Low-cost to implement.** For around \$160 start-up, you can add this feature to save time & money, paying for itself in no time! Use a staff member's compatible phone and you already have all you need to get started!
- **Saves Paper.** As rosters are not needed ahead of the meal, the pre-printed paper forms are no longer outdated as child classroom changes take place. The child list is always up-to-date!
- **Reduces workload.** Traditional paper recording requires that a **Meal Service Record (MSR)** be printed. Meals are then recorded through hand-written checkmarks. The MSR is then used for entry into the computer. This takes valuable time, but also leaves much room for error. **ChildWatch[®]** eases the burden of capturing meals for the CACFP.

Online Services

eServices

Our optional *eServices* offerings are comprised of the following:

- **Client Web Services.** Allow your clients (parents of children) remote online access to check their balance, print statements, communicate with teachers, view the online events calendar and more. You control which features are available!
- **Online Enrollment Requests.** If your business has a website, this feature allows you to directly integrate an enrollment request form for **waiting list automation**. Once approved by your staff, enrolling an entire family takes only a couple of clicks!
- **ePay.** By opening a merchant account through RSI, parents are able to make payments electronically through either credit card or *eCheck*. This helps to reduce outstanding revenue and offers an tremendous convenience to parents from work or home.
- **Point-of-Service Meal Capture (CACFP only).** Using an *iPhone*[®] or *iPod Touch*[®], meals are quickly captured electronically at the point-of-service. This feature is a huge time-saver while reducing fraud, simplifying user responsibilities and speeding up the claims process. This feature alone can pay for all services combined!
