

ChildWatch[®]

Online Services

Why Web Software?

In the old days, software was run on a single computer. Soon the need arose for multiple computers to be connected and hence networks were born. This worked well and provided simultaneous access from a single office or more expensively, from multiple locations.

Eventually however, users' needs grew further and today require access not only from work and home, but on-the-go using hand-held mobile devices. Enter the World Wide Web!

With the web, systems are naturally networked and can be located anywhere in the world. without the high costs of maintaining networks. With the advent of mobile technology, devices now provide instant access to data without being in front of a desk or in an office.

- ✓ 24/7 Access from Anywhere
- ✓ Low-cost Entry, No Large Outlay
- ✓ Extended Services to Parents
- ✓ Automatic Backups & Updates
- ✓ Minimal System Requirements
- ✓ Windows[®], Macintosh[®] & Mobile

ChildWatch[®] fulfills today's users' needs entirely. Users no longer need to worry about installing and updating software, performing routine backups or missing their data when not at work. Computers and devices are no longer limited to either Windows, Macintosh or other.

Embrace the web as it is here to stay! Try our service risk-free and you'll experience all the advantages and conveniences of the 21st century, web-based software!
